Campus Companion - Mid-Course Progress Report

Group members: Malasa Khan (100926569), Mehreen Morshed (100915416), Muskan Morshed (100911166), Shimza Warraich (100920100)

1. Completed work

Required functionality	Status	Where in the app
Home page	Done	Homepage: lib/screens/home_screen.dart
App drawer & UI settings	Done	widgets/app_drawer.dart, darkmode in app drawer and settings.
Multiple screens & navigation	Done	Can navigate using bottom tabs, or using the app drawer. Pages: Home, Academics, Study, Insights, Campus Map, Settings
Dialogs & pickers	Done	Add assignment dialog, date pickers for creating deadline, confirmation dialog before deleting a deadline.
List view / grid view	Partial	List view in homepage, Academics page, settings, app drawer, study season page, insights page. Can be found in lib/screens
Forms & input	Done	Assignment creation, adding course
Notifications	Not started	Deadline notification, timer
Snackbars	Done	Adding assignment, Deleting assignment with undo, maps unable to open,
Local storage	Partial	Only stores favourites in maps, need to save assignments and course data

HTTP requests	Partial	Maps: takes location's address and searches on google maps

2. Remaining work (owner, target date)

Work	**assigned**	**target**
Notifications: upcoming assignment deadlines, study timer completion, reminders.	Shimza	Nov 16
Local and cloud storage: info saves when you close the app	Shimza	Nov 16
HTTP requests: campus weather, maps	Muskan	Nov 16
Course delete and rename	Malasa	Nov 16
Calendar: for seeing deadline schedule, homepage shows upcoming deadlines.	Malasa/Mehreen	Nov 18
Geolocation: allow users to retrieve their current location for weather.	Muskan	Nov 18
List and Grid Views: Expand the existing list-based interfaces by introducing grid layouts where appropriate.	Malasa	Nov 18
Charts: insights page needs better data visualization	Mehreen	Nov 18
Map visual	Malasa/Muskan	Nov 21
Maps bugs: missing food options and building	Muskan	Nov 21
Update UI aesthetics	Mehreen	Nov 21
Computer Vision feature: notes scanner	Shimza/Mehreen	Nov 29
Testing	Malasa/Mehreen/Muskan/Shimza	Nov 30

3. Changes from the proposal (what changed and why)

- Planned responsibilities changed. We had different schedules so responsibilities were switched since some things needed to be done first.
- Maps for now is a searchable feature for the Ontario tech campus. It takes you to the external google maps app. We intend to add map functionality within the app itself
- Dark mode was added for UI settings the user can modify
- Planning to add a calendar to view deadlines visually
- Overall not many changes made from the proposal.

4. Known issues

- Maps is missing a few buildings and campus food options
- Weather data is missing
- Data, goals and settings remain in memory and reset on restart.
- No device notifications, cloud/local persistence, weather HTTP integration or login.
- Timer completion is in-app feedback; suspended apps may show it only on resuming.
- Course rename/delete is not implemented.
- Sessions are attributed to their completion date.
- Snackbars are queued and can appear later if several actions occur quickly.

5. Team responsibilities and contributions so far

Member	Planned responsibilities	Contributions so far
Malasa	- Calendar - Gridview - Map visual - Testing - Pageview - Course delete/rename	- App drawer and darkmode toggle - Add course - Add insights - Welcome screen - Snackbar undo
Mehreen	- Calendar - Charts - User interface - Notes scanner - Testing	- Homepage - Page navigation - Add assignment - Stopwatch feature - Testing
Muskan	- Campus weather - Maps bugs - Maps visual - Geolocation - Testing	- Maps: search, filter, favourites, external search to google maps - Demo video
Shimza	- Notifications - Local/Cloud storage - Notes Scanner - Testing	- Fixing bugs - Snackbar - Testing - README

6. How to run / test account

If you're running for the first time:

```
cd code
flutter pub add url_launcher
flutter pub add shared_preferences
flutter pub get
flutter run
```

(flutter should be installed)

7. Generative AI use (tool, prompts, what it was used for)

Generative AI was used as a tool to:

- fix bugs and compilation errors
- help with best way to separate code for modularity (the file structure)
- Timer
- Maps
- exploring additional features beyond the concepts learnt in class

Prompts:

- Why am I getting this error: [insert error message]
- What is the best way to separate main.dart to different files for modularity for flutter app
- How do I add a maps feature to my flutter app with filter options
- How to implement persistent favourites feature so favourites are saved
- Maps button is not opening google maps how to fix
- Is notescanner a good option for implementing computer vision in my app
